National Aeronautics and Space Administration

Digital Learning Network™

NASA's Digital Learning Network brings NASA into your classroom using videoconferencing technology. This distance learning initiative provides a unique experience for students and educators at the K12 and university levels, bringing NASA's unique content, facilities, and personnel right into their classrooms. NASA's DLN provides student programming, professional development, and special event programming for K-12 schools across the country.

Using interactive instructional technology in support of long-term retention of knowledge the DLN delivers content as only NASA can. Learners at all levels have the opportunity to interact directly with NASA scientists and educational specialists to gain a new appreciation for the importance of science and education.

Everything you need to explore NASA's DLN™
<http://dln.nasa.gov/dln>

Digital Learning Network™ Programming Includes:

- Interactive Classroom Modules
- Professional Development
- Special Event Programming (keynote presentations, science fairs, & school / community family nights)
